

# Tactical Investigation Manager

## Standalone AI Fusion Supercomputer

*On-premises. Offline. Defensible triage at scale.*

### Mass Data Ingestion

Ingest databases, case files, exports, structured and unstructured data.

### Automated Fusion

Correlate entities, timelines, identifiers, and relationships automatically.

### 1-Click Case Reports

Generate structured, briefing-ready operational outputs instantly.

## What it is

The Tactical Case Manager is a fully self-contained AI fusion system deployed inside a rugged Pelican case. It enables investigators to ingest large volumes of disconnected data — databases, structured records, legacy case systems, forensic exports, documents, financial files, and intelligence reports — and convert them into a unified, searchable case workspace. It operates entirely within the client environment, with no cloud dependency and no external transmission of case data.

## Why it matters

Modern investigations fail not because data is missing, but because it is fragmented. Analysts spend days manually correlating spreadsheets, PDFs, intelligence notes, financial records, and historic case files.

The Tactical Case Manager automates fusion, triage, and correlation so teams can quickly determine:

- What connections are operationally relevant
- What the case actually contains
- Whether sufficient evidence exists
- Whether escalation is justified

*Use AI to help you solve your cases*

### AI Case Management & Drag-and-Drop Fusion

#### HOW IT WORKS

- 1 Drag-and-Drop Ingestion**  
Upload mass databases, spreadsheets, case exports, reports, and documents directly into a case workspace.
- 2 Automated Structuring**  
The system parses, normalizes, indexes, and organizes heterogeneous data automatically.
- 3 Entity Extraction & Correlation**  
People, companies, accounts, identifiers, dates, locations and references are extracted and linked across sources.
- 4 Tactical Understanding**  
Generate link graphs, timelines, structured summaries, and automated intelligence briefs.

#### WHAT YOU CAN INGEST

-  **Police Files**
-  **Financial Records**
-  **Email Archives**
-  **Forensic Exports**
-  **Intelligence Reports**
-  **Mass Unstructured Data**
-  **Structured Databases**
-  **Data Dumps**
-  **Historic Case Systems**

#### SECURITY & SOVEREIGNTY

- Air-gapped deployment supported
- No external data transmission by default
- Role-based access control
- Tamper-evident audit logs
- Zero-knowledge support posture
- End-to-end encryption (transit/rest)

#### In-a-box FORM FACTOR

Rugged Tactical Appliance delivered inside a hardened case designed for:

- Field deployment
- Secure rooms
- Mobile intelligence units
- Rapid operational setup

Fully operational in minutes

#### OPERATIONAL IMPACT

-  **Reduce time to operational picture**
-  **Standardize analyst output**
-  **Eliminate manual cross-referencing**
-  **Increase evidentiary defensibility**

Outputs are analytical aids and require human review. Operational decisions remain with authorised personnel.
